SolaAir - FAQ

The system is based on the lattice panel with the mounting holes. The panel is made of durable polymer material with high density and transparency. The panel consists of intersecting strips. On each strap there are a certain number of rods, thus forming the system. At each rod suspended from the movable reflecting element (hereinafter M.R.E.). M.R.E. is provided in three forms: disk, square, octagon. M.R.E. is made from a thin polymeric material having a, high quality color coating. Mirror coating M.R.E. has a maximum of reflectivity, and a high degree of protection from UV radiation. SolaAir modules are manufactured in different sizes:

SolaAir Standard: overall size 300x300mm, (size 30x30mm reflective element)

SolaAir Pixel: dimensions 290x290mm, (size of the reflecting element 20x20mm)

Panel SolaAir presented in different colors: standard colors (Monochrome), multi-color design (polychrome), special Effects.

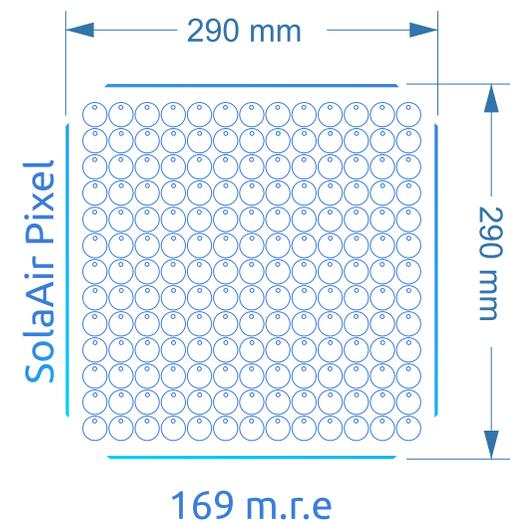

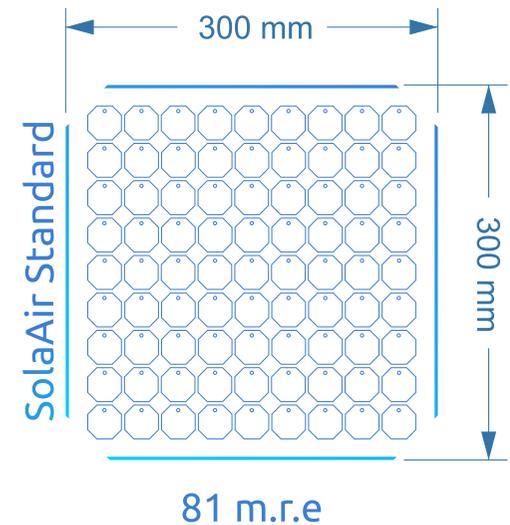

Standard color (monochrome) - more than 15 vivid color shades (mirror, gold, white, black, red, yellow, orange, crimson, violet, purple, blue, green, turquoise, holographic).

Full-color version (polychrome) - any photo can be applied over the reflecting elements.

Each panel SolaAir has a large number of mounting holes diameter 3mm. Mounting holes located under each of the reflecting element. Panel SolaAir® can be fastened to the surface with double-sided tape, glue, screws.

Panel SolaAir on each side and has connecting elements that are executed on the basis of spike/hole. This kind of attachment we get very rigid and reliable attachment between panels.

We offer our clients best terms of service, and warranty product warranty 12 months.

Prices are valid until 01/03/2017

Payment Methods: For all international transactions we accept Western Union and provide option to pay using PayPal.

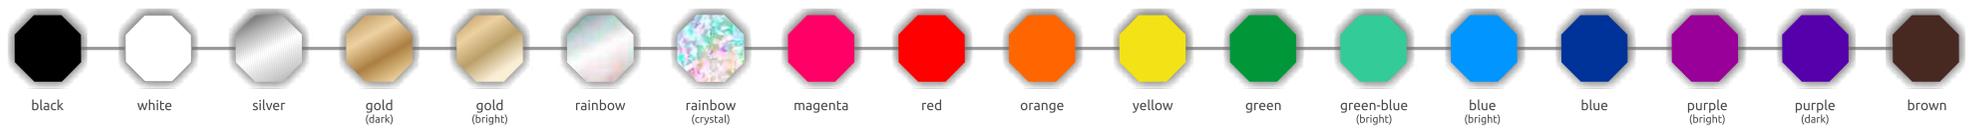

Shipping: All orders are processed from our own warehouse in Krasnodar, Russia. All overseas orders comes with a tracking reference & can be traced. All orders will be shipped out within 2-7 working days and an email with shipping number will be sent to notify you once your order has been shipped.

We ship worldwide.

The forms of mobile element module standart and module pixel

Wide range of colors

SolaAir print

Ways of implementing the application of individual images on mobile elements are 4 varieties:

1 **BASE - SILVER MIRROR**
The image has the high reflectivity, high refractive index and a glossy shine. The white color is replaced with a silver mirror.

2 **BASE - WHITE COLOR**
The image has a low reflectivity, high glossy index. There is white color, rich colors, high density.

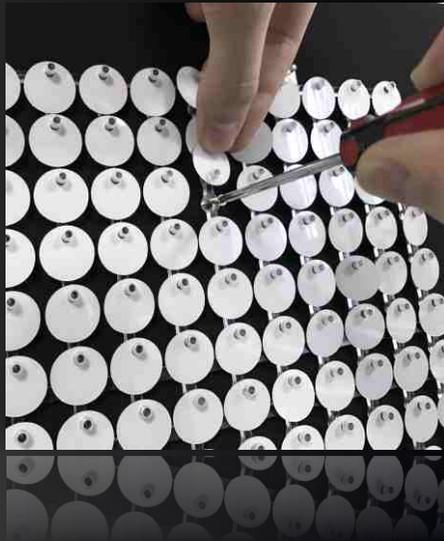

3 **BASE - RAINBOW HOLOGRAFIC CRYSTALS**
The image has an average reflectivity, high refractive index and a glossy shine. The white color is replaced by a holographic rainbow crystals. The image appears the effect of crystals rainbow overflow as well as holographic effect.

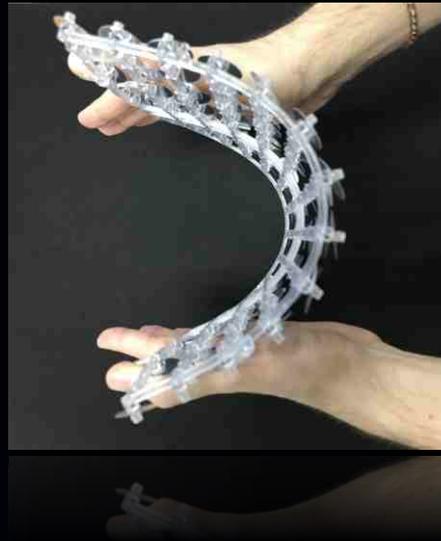

4 **BASE - HOLOGRAFIC SILVER**
The image has an average reflectivity, high refractive index and a glossy shine. The white color is replaced with an holographic crystals. On the image appears effect rainbow overflow.

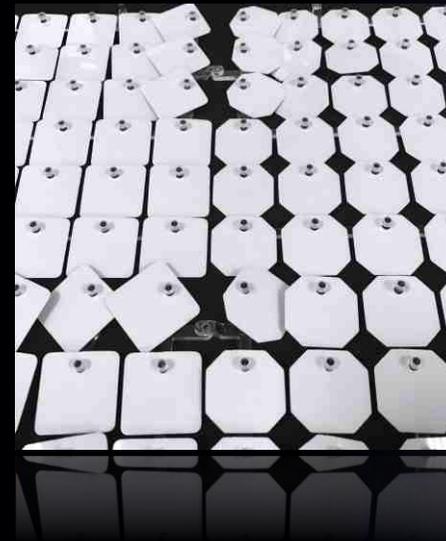

Guidance on the use of panels SolaAir

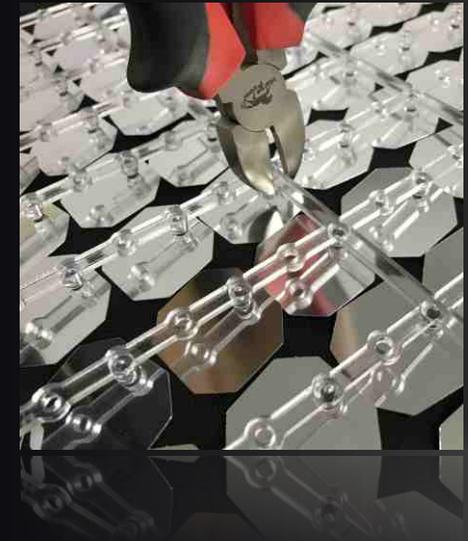

1 Fixing panels by using screws through holes hidden under the movable element

2 Module frame is made of sturdy but flexible material allows to mount the module on curved bases

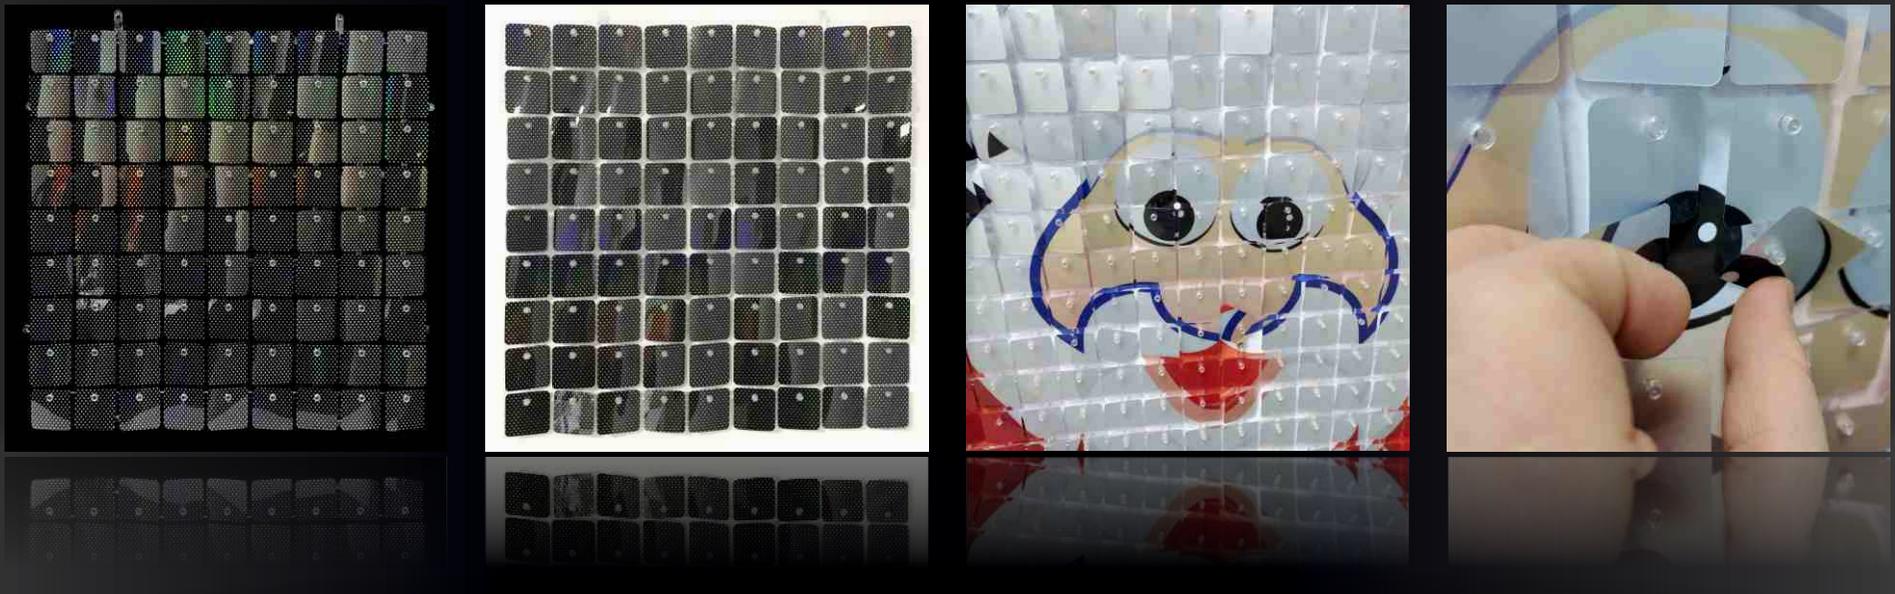

3 For ease of assembly of the modules into a big single panel there is a connection system

4 If the foundations of the size is not a multiple of the module, it is cut to the desired size, the remainder can be used later

Guidance on the use of panels SolaAir

Module SolaAir presented in a transparent frame. To enhance visual effect, we recommend you to use the color of the background is the same as the color of the moving elements, and in the case of modules with applied multicolor custom image - use background, with a same duplicate image.
